SOLUTIONS ENGINEER | API INTEGRATIONS

Solutions and Implementation Engineer with nearly three years of experience integrating fintech and SaaS platforms through REST APIs, webhooks, and third-party services. Combines hands-on development experience in C#, .NET, SQL, and Azure with customer-facing troubleshooting, technical documentation, product demonstrations, and cross-functional implementation support. Skilled at isolating failures across internal systems, vendor platforms, and client requests, then communicating clear resolutions to technical and non-technical stakeholders.

TECHNICAL SKILLS

APIs & Integrations: REST APIs, Webhooks, Postman, Swagger/OpenAPI, API Testing, Integration Troubleshooting, Root-Cause Analysis, Technical Documentation

Platforms & Vendors: Middesk, MoneyKit, Kinective, Socure, SendGrid

Languages & Frameworks: C#, ASP.NET Core, .NET, TypeScript, JavaScript, SQL, Python, React, Entity Framework Core

Data & Cloud: SQL Server, Azure Portal, Azure Trace Logging, Docker, Git, SSH, Role-Based Access Control

PROFESSIONAL EXPERIENCE

Associate Software Engineer

MSU Federal Credit Union | Remote

August 2023 – Present

Support the implementation, integration, and ongoing operation of Banking-as-a-Service, financial education, and money movement platforms serving more than 400,000 credit union members and 50,000+ university students.

- Implemented and maintained REST API and webhook integrations with Middesk, MoneyKit, Kinective, Socure, and SendGrid, enabling business verification, core banking connectivity, external account linking, and automated customer notifications.
- Built the Middesk KYB integration connecting an ASP.NET Core application and SQL Server database with asynchronous verification webhooks, allowing commercial applicants to complete digital onboarding and receive account and routing numbers after approval.
- Restored a failed commercial account provisioning pipeline by using Azure trace logs, SQL analysis, and Postman to distinguish active records from orphaned vendor records following a sandbox reset, re-establish system linkage, and return the integration to production.
- Implemented MoneyKit external account linking and fund-record workflows supporting ACH funding and transfers, including secure relinking behavior and payment processor state management.
- Resolved a recurring relinking defect by correcting duplicate-validation scope and resetting stale processor data, restoring the user flow and eliminating related support issues.

- Investigated a client-reported ACH eligibility failure by tracing requests across logs and database records, proving the client application was submitting a stale identifier, and guiding the customer to correct its request flow without changes to the platform.
- Diagnose integration failures across internal code, third-party vendors, and client-submitted requests, then communicate findings and next steps without assigning blame across system boundaries.
- Partner daily with Product and UX teams and regularly with Operations and customers to answer technical questions, coordinate implementations, debug issues, and demonstrate product and API functionality.
- Create API documentation, Swagger specifications, developer instructions, and integration guides used by engineers, product managers, and customers to understand and implement platform capabilities.
- Built and maintained 75+ ASP.NET Core REST API endpoints supporting onboarding, consent management, account linking, financial education, and money movement workflows.
- Designed an internal relational test-data generator that accelerated API development, integration testing, and environment setup by producing valid data across interdependent SQL Server tables.
- Support integrations after launch through monitoring, enhancements, production incident response, root-cause analysis, and ongoing customer troubleshooting.

PREVIOUS EXPERIENCE

Assistant Language Teacher

JET Program | Kyoto, Japan
2022

- Taught across seven grade levels and adapted complex concepts for audiences with different experience levels, building the communication and presentation skills now used in customer-facing technical work.

EDUCATION

Hack Reactor

Advanced Software Engineering Certificate | 2023

Nihongo Center

Intensive Japanese Language Program | 2019–2020

State University of New York at Oswego

Bachelor of Arts, Global Studies | 2019
